BEHRINGER Studio Monitor Wins Listening Test Against \$9,000 Hi-Fi Speaker

Posted on May 15, 2013 by Sherry Lipp

5/15/2013 Bothell, WA — In a recent independent test, the BEHRINGER [TRUTH B2031A](#) studio monitor loudspeakers matched the performance of the much higher-priced and acclaimed Linkwitz Orion loudspeakers. Earl R. Geddes, PhD., a leading authority in loudspeaker design, conducted a scientifically controlled blind listening test as well as a series of measurement tests in his advanced polar measurement lab. In the end, Dr. Geddes concluded that the TRUTH B2031A was in the same class as the much more expensive loudspeaker. In a letter to BEHRINGER, Geddes says, “I was totally impressed by the BEHRINGER’s performance. It was clearly a highly-refined design which showed a great deal of talent in its design.”

BEHRINGER is excited to receive such high praise from an expert of Dr. Geddes’ caliber in the audio industry. Geddes went on to say, “I must commend your design team on what can only be seen as a remarkable achievement — bringing truly high performance into the range of highly-affordable product.” The popular TRUTH Loudspeakers have been sold to everyone from professional audio engineers to musicians building their own home studio. “We are pleased to have heard from Dr. Geddes personally about his test of the B2031A monitors, and we are not surprised at the results. The speakers have been used by some of the most discerning audio experts in the world,” commented SVP of Marketing, Costa Lakoumentas.

About Earl R. Geddes, PhD.

Earl R. Geddes, PhD. is an audio enthusiast with an expertise in active and passive methods of noise control. He is the president of GedLee LLC, a designer of Geddes Loudspeakers, and has written several books on audio and acoustics with his business partner Lidia W. Lee, PhD. In addition to his work as an audio consultant and designer of loudspeakers, Geddes’ main areas of interest are in compressed audio, home theater, and loudspeaker simulation and measurement.

About the TRUTH B2031A Studio Monitors

Designed for the recording studio, the TRUTH B2031A is a serious contender capable of achieving output levels in excess of 116 dB SPL, and is powered by a built-in 265-Watt bi-amp module. The 2-way reference monitors are perfect for nearfield monitoring applications: from small mixing environments to multi-channel surround setups. The monitors provide ultra-linear frequency response from 50 Hz to 21 kHz, are hand-aligned and come with an individual measurement protocol. The B2031A is adjustable to a wide range of acoustic conditions and subwoofer operation, providing the flexibility needed for any recording situation. The BEHRINGER TRUTH B2031A Studio Monitors are available for the street price of \$229.99 each, and are backed by a 3-Year Warranty Program.

About BEHRINGER

BEHRINGER helped inspire a new generation of musicians and define the “Prosumer” or home recording market by making previously unattainable professional audio products affordable. Since its inception in 1989, the company has grown to become a world leader, with tens of millions of users across the globe. Offering a comprehensive range of products that span multiple categories, including mixers, amplifiers, loudspeakers and every other part of the audio signal chain, BEHRINGER is helping artists, musicians, DJs, producers, engineers and aspiring talent realize their musical dreams.

BEHRINGER is owned by MUSIC Group.
